

Mechatronics – service from a single source

We are your main contact partner at Zurich Airport for mechatronic systems. From the initial clarification of your needs through planning, implementation, maintenance and administration, we offer you everything from a single source. Reliability, a high level of availability and security are our top priority.

Benefits

Mechatronics from a single source

Short routes and independent solutions that are fast, customer-oriented and customised, not "over engineered"

Well-trained specialists with extensive know-how as well as detailed knowledge of locations and markets

Troubleshooting service from 05:15–23:00 and round-the-clock standby service

As one of the biggest providers of access systems (online/offline) in Switzerland, we have many years of experience with all access systems

We offer protected lock systems. Our portfolio includes customers with extremely stringent security requirements.

As specialist designers, we support you with tenders and evaluation of suitable products

The selection of sustainable products and continuity ensure that systems and equipment are always state-of-the-art

Spare parts from the best-known suppliers are quickly available from our own on-site warehouse

Leasing system for access systems creates cost transparency and relieves you of software and any updates

Documents relating to liability and security-related maintenance tasks are archived and can be presented to official inspectors at all times

QUALITY STANDARDS

- We attach importance to using systems and equipment that are expandable and mutually compatible
- Our specialist staff receive periodic training
- The high quality standards demanded by the airport apply to all customers, tenants and partners
- Our top priority is the high reliability and availability of the facilities

QUALITY CONTROL

- Regular audits and inspections by the authorities for security-related technical equipment
- End-to-end documentation and traceability of changes to media
- End-to-end documentation and archiving relating to servicing, maintenance, inspections, overhauls and repairs
- We will be pleased to provide the relevant extract for evaluations of the tasks entrusted to us upon request
- Compliance with legal standards and guidelines.
- Tracking of claims under warranty
